SUZOHAPP to showcase wide portfolio of cash and cashless solutions at AVEX

AVEX is the UK's leading exhibition for the vending and coffee industries, providing a platform for the display of the latest technology, product development and innovation from all sectors of these industries. This year, AVEX will take place in Birmingham between the 12th and 13th of September. SUZOHAPP will be showing its solutions for cash and cashless management at **Stand 211**.

The focus will be on the **Currenza C²** that is the benchmark product in the vending industry for coin acceptance and recycling technology. Thanks to the PRP (Payout Redundancy Protection) system, six tubes and three independent motors, the Currenza C² reduces downtime and guarantees maximum security in every application. The Currenza C² is implemented when operators wish to offer change-giving. When there is no need to pay back change - for example, in table-top vending machines - SUZOHAPP offers the **Comestero RM5** electronic coin validator. With over one and a half million units sold worldwide, the RM5 is trusted by Vending operators for its proven quality and reliability.

In cashless payment technology, SUZOHAPP provides the **WorldKey** solution, the most complete and reliable cashless range in the market. It offers many new functionalities, such as Age Detector, Day Free Vend, wallet expiration, QR code reader and credit card reloading. WorldKey customers can furthermore benefit from the innovative WorldKey Loyalty platform, the new online solution that allows operators to communicate directly with end users and develop loyalty programs. Operators can thus plan one-to-one campaigns via email based on the behaviors and habits of their customers. The results are increased turnover and more satisfied customers through customized promotions.

Furthermore, SUZOHAPP will showcase the **P68 cashless payment terminal** that has been specifically developed for the vending industry. Payment can be made using contactless, chip or magnetic stripe, as well through a smartphone using Apple Pay or Samsung Pay. All P6 series terminals can be connected to WorldKey private cashless systems, permitting direct cashless upload to Mifare media (keys, tags, cards, stickers).

Vending operators are faced with the challenge of counting and sorting many coins and often banknotes as well. At this year's AVEX, SUZOHAPP will present complete **SCAN COIN back-office solutions**, including:

- the DTC-9 that can count and sort up to nine different coin denominations
- the SC-8220, a high quality value and multi-currency banknote counter
- the CDS-820i, a complete deposit system

Nick Norris, Sales and Technical Manager in the UK and Ireland, sends out a warm welcome, stating “We continue to invest in providing complete solutions for all types of cash and cashless payment needs. Today we are a one-stop shop for all requirements around cash and cashless management. Please stop by **stand 211** and find out how we can help your business.”

About SUZOHAPP

SUZOHAPP is a technology company providing software and hardware for cash handling automation and self-service solutions to more than 25,000 customers throughout the world.
