

## SUZHAPP: Advanced components for limitless opportunities

SUZHAPP provides software and hardware for cash handling automation and self-service solutions to more than 25,000 customers worldwide. Solutions include cash deposit, recycling, processing and payment systems, as well as a broad range of self-service component technologies. For bill validation technology, SUZHAPP offers the Bill-to-Bill range – the most efficient and reliable currency management system designed to validate and recycle banknotes. By using the note recyclers, the operator can achieve higher customer throughput and higher cash replenishment rates.

For coin validation technology, SUZHAPP is known for its Comestero RM5 HD coin validator that ensures a high level of recognition and discrimination of valid and

counterfeit coins for maximum security in every application.

Additional solutions from SUZHAPP include a wide range of coin hoppers, such as the Evolution Hopper which guarantees high dispensing speeds and reliability with trouble-free operation due to being constructed from high quality material. Furthermore, SUZHAPP's WGR solution is a coin handling carousel with two main functions: storing coins, acting as an escrow to return rejected coins, and it serving as a payout system that assures optimal security. The modular design allows several carousels to be placed on top of each other by using a simple rack construction, resulting in a complete coin storage and payout system.
